

Western Bahr el Ghazal Situation and Response Report | Update #8

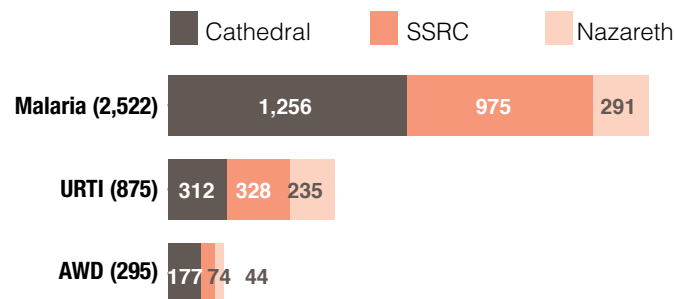

IOM | South Sudan

25 July 2016

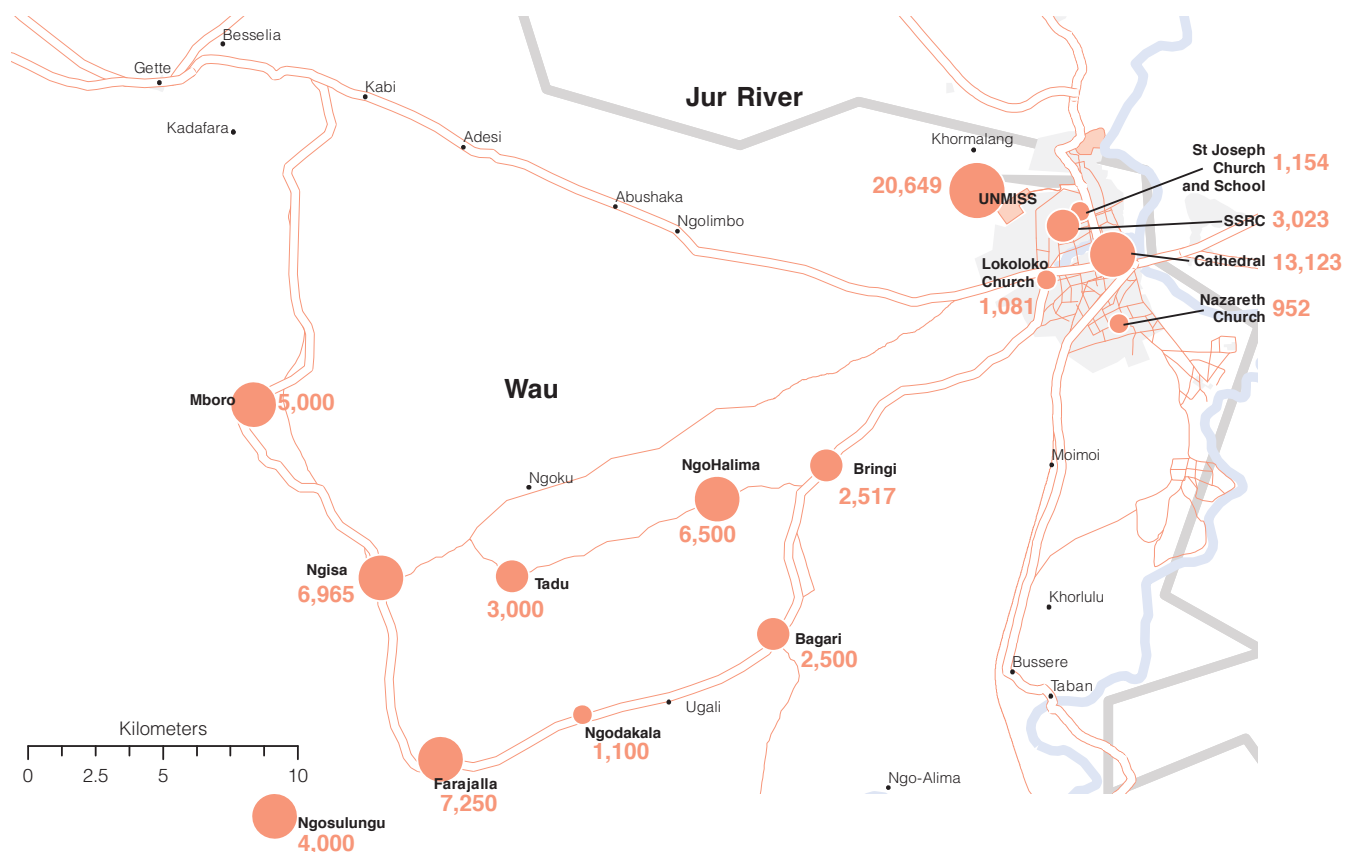

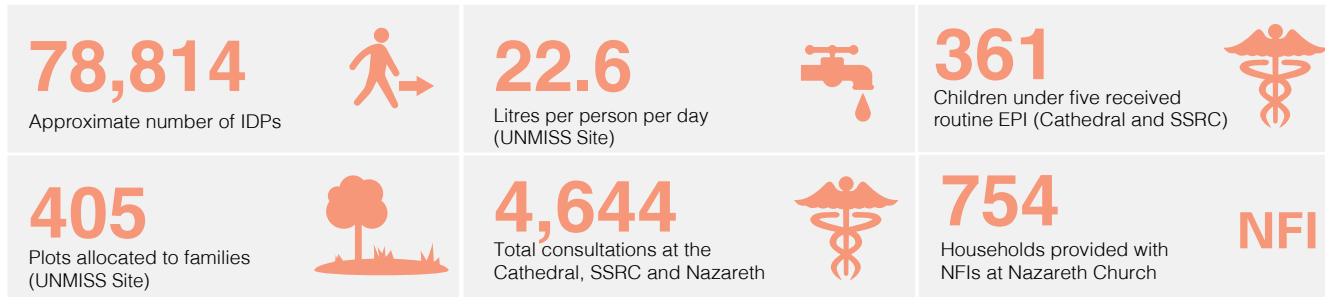

Health: Movement to Ngisa clinic is still restricted due to insecurity. This week, a new clinic was established in Nazareth to serve IDPs and the host community. Routine vaccination of children and women of reproductive age or pregnant continued at the Cathedral and SSRC sites. Vaccination services will start at Nazareth next week. Eleven health promotion sessions were conducted at the Cathedral and SSRC, with 3,036 individuals receiving health messages on prevention of diarrhoea, handwashing, malaria, personal hygiene and antenatal care. Health partners are forming a Cholera response taskforce.

Top 3 morbidities

PSS: 59 cases were attended to at the UNMISS site, SSRC and the Cathedral. There were high numbers of people who had experienced or witnessed violence, with 41 females and three males seen. The referral system is in place and working well. Fifteen cases were identified as needed registration and NFI support; six cases referred for medical attention and five separated children were referred to the ICRC for family tracing.

WASH: At the UNMISS protected area, IOM is supplying 468,000 litres of water per day. Total water storage capacity is at 170m³, utilising plus two T45 water tanks, four T10 bladders, and two sets of 20m³ bladder tanks in the protection area extension. Four water quality monitors have been recruited and are training. Daily water treatment with chlorine is ongoing, and daily water quality monitoring is occurring for FRC, chlorine demand and Jar Test, with results within acceptable parameters. This week, IOM will start rehabilitating boreholes in Wau South, based on an updated list of boreholes received from Rural Water Department.

Site expansion activities progressed and are almost complete

Over the last 7-days S-NFI distributions took place in Loko Loko and Nazareth Church

CCCM

Co-ordination with community leadership and partner agencies has focused on cholera preparedness and responses in the UNMISS protected area, and contingency planning for insecurity and access issues. Extension site improvement works are almost complete with perimeter fencing and drainage works ongoing this week. The relocation of people from overcrowded areas of the current site started on July 20 with people living by the IMC clinic, within six meters of latrines and in the school. Communication with communities activities.

DTM

Movement Trend Tracking (MTT) has been tracking new arrivals and households permanently leaving the UNMISS protected area and Cathedral. Data collection and initial analysis for intention surveys was completed (194 sample households at the Cathedral and 273 at the UNMISS protected area). A mapping exercise identified the major neighbourhoods in town and will complement the results of the intention surveys.

S-NFI

Teams are still unable to access sites outside town. As Cluster lead IOM is co-ordinating and conducting assessments and distributions. This week, NFIs (blanket, Mosquito net, Sleeping mats and jerry-cans) were distributed to 754 households at the Nazareth Church. Three communal shelters were constructed at the Cathedral, providing shelter to 120 people. A fourth will be finalised soon. The S-NFI teams planned for the response strategy in other collective centres with CCCM Camp Management.
